Paralinx about camera integration; Amazon, Google and IBM about cloud computing.

**WWDC and Silicon Valley:** We were very pleasantly surprised to be invited by Apple to their World Wide Developers Conference in San Jose in June, despite not having applied. It's a valuable chance to learn and make new connections. We're also setting aside time to meet other potential partners.

**Cine Gear:** We have decided not to attend the Cine Gear expo in L.A. this year, since feedback from many users about the show were mixed, and our planned beta version of 3.0 is slightly delayed.

**Development and launch:** Development is around one month behind our original schedule. We expect the delay to decrease, with new developers on board.

The launch of Drylab 3.0 will take place at the International Broadcasters Convention in Amsterdam in September, and we are working hard to get solid feedback from pilot users before then.

**Annual General Meeting:** Drylab's AGM will be held on June 16th at 15:00. An invitation will be distributed to all owners well in advance. We hope to see you there!

**As you can see it has been a hectic spring that has given us a lot of confirmation about our product. We are now working eagerly and hard towards the US launch with Drylab 3.0, while keeping momentum in Europe with our existing system.**
